

## Data engineer

(Amsterdam, fulltime)

Redevco is looking for a highly skilled Data Engineer to join our dynamic team.

You will design, build, and maintain data infrastructure to ensure optimal extraction, transformation, loading, and analysis of large datasets. You will collaborate closely with stakeholders across the business, the wider BI and IT team as well as external parties to enable informed decision-making through efficient data systems.

### **Key responsibilities:**

- Develop and maintain data pipelines and infrastructure (in Azure)
- Ensure the reliability, performance and scalability of data systems
- Optimize existing data infrastructure and automate data-related tasks
- Manage ETL processes, ensuring efficient data ingestion and integration
- Implement data storage solutions and maintain databases and data warehouses
- Collaborate with cross-functional teams to understand data requirements and deliver appropriate solutions
- Ensure data quality and security with applicable standards
- Troubleshoot data-related issues and implement timely resolutions
- Document technical processes and standards clearly and concisely

### **Who we are looking for:**

- Equal mix of analytical, problem solving and social skills
- Experienced in data warehousing concepts and schema design
- Able to design and build efficient, reliable and scalable data pipelines
- Preferably application development experience (i.e. DevOps way of working – CI/CD, GIT, knowledge of Spark and/or Python)
- Experience using Azure's data & development platform (more specifically: Azure Data Factory, Azure Data Lake gen2, Azure SQL, Azure DevOps)
- Experience in DAX and tabular models

If you are interested in this position, we look forward to receiving your application. Please email to: [edith.verbossen@redevco.com](mailto:edith.verbossen@redevco.com)
